national**grid** 2013-14 Triads

The Triads are calculated in accordance with the Statement of Use of System Charging Methodology (See Section 14 of the Connection and Use of System Code.) They are based on the latest settlement data available when the Triad was calculated in March 2014, as illustrated by the run type (SF = Settlement Final; R1 = Reconcilation 1; R2 = Reconcilation 2).

A Triad can occur on any settlement period between the start of the start of November and end of February.

Monday 25th November 2013 had the highest half hour average demand of 50,694MW between 17:00 and 17:30 and was therefore a Triad. No further Triads could have occurred between 15th November and 5th December 2013, inclusive, due to the ten clear day rule.

The next highest half hour average demand of 49,947MW occurred on Thursday 30 January 2014 between 17:00 and 17:30 and was therefore a Triad. No further Triads could have occurred between 20th January and 9th February 2014, inclusive, due to the ten clear day rule.

The next highest half hour average demand of 49,927MW occurred on Friday 6 December 2014 between 17:00 and 17:30 and was therefore a Triad.
